

Country list, file cleansing

Country list for address file cleansing, November 2011

The following table contains a list of all countries for which addresses can be checked and corrected in the context of a file cleansing operation. The validation is performed down to street level and sometimes even house number level for the countries listed below. The countries are grouped by continents and sorted in alphabetical order within each continent. The validation classes (A to E) provide information on the scope of the available validation function. Refer to the legend at the bottom of the list.

Legend – validation classes and their scope

A	The Uniserv expert system for address validation is available without any restrictions. Intelligent search and analysis methods as well as country-specific logic ensure the highest possible accuracy of results.
B	Postcode, town and street can be checked for a large number of towns.
C	Postcode, town and district are checked.
D	Postcode and town are checked.
E	The town only is checked; there may not be a postcode system.
